

SWING DOOR OPERATORS

Sesamo presents its complete range of **electromechanical operators** for swing doors made to cover all fields of application thanks to the **various possibilities of configurations**, even in Low Energy. Our operators are suitable for automating **internal and external doors, single or double leaf**. They ease the entrances into **hospitals, shops, hotels** and barrier-free applications.

STATE OF THE ART AUTOMATIONS

The research and development of innovative and sustainable technical-constructive solutions are a determining factor for the realization of **Sesamo** products. Thanks to their ductility, power, mechanical solidity and sophisticated electronics, **Sesamo** operators guarantee constant operation in any type of situation. **Sesamo** guarantees an optimal solution for any type of entrance: for interior doors with low traffic intensity, for special applications (e.g. low energy, free-barrier, etc..) or for entrances with high traffic intensity and heavy use in shopping centers, airports, hospitals and pharmaceutical environments. The weight reduction, the pre-drilled base plate and the reduced number of components of Sesamo swing door operators, allow an easy, fast and intuitive installation. Thanks to the high power of their gearmotors, the solidity of the components and the use of sophisticated motion control managed by the microprocessors of the main board, Sesamo operators guarantee reliable operation even in situations of strong wind or contrary pressure. An innovative algorithm contained in the firmware developed by **Sesamo** to control the position of the door and supported by an encoder at high resolution allow a perfect movement even in extreme situations. The particular “anti-wind” function developed by **Sesamo** and present in the model **Proswing S** makes possible the installation even in critical conditions, windy areas or pharmaceutical plants with high pressure gradients, ensuring correct operation thanks to the torque level expressed by the motor.

SWINGO

Swingo combines a refined and innovative design with a natural strength and is perfect for use on interior doors. The integrated safety device patented by Sesamo is important and reliable, designed to preserve the gears and engine in the event of collisions. Appropriate choices of materials and use of the most advanced technological solutions reduce vibrations and the transmission of noise, these make its operation extremely silent.

The electronics provide the installer with the of necessary tools to obtain the possibility customization or diagnosis during maintenance. Thanks to its small dimensions and its harmonic

design **Swingo** appears to be compatible with multiple application:

- Silence, sophisticated design and with a small

dimension suitable for residential use

- Available with cover Black or Silver grey colors
- It can be set as "Low Energy": reduced speed for

barrier-free applications

- Integrated emergency battery back up to guarantee continuity of operation in the event of a power failure

INSTALLATION WITH PULL OR PUSH ARM

PUSH ARM

smartPRO

Swing door operator designed to simplify the installation and commissioning as much as possible. The innovative core of the operator is represented by the transmission, consisting of the gearmotor already used with excellent quality results in other **Sesamo** operators, combined with a single reduction stage gearbox patented by **Sesamo**, which is innovative compared to all competing products, made by a roller chain with sealed lubrication (self-lubricating). This solution guarantees a long service life and no maintenance. The system is completed by a mechanical energy accumulator made with a special and innovative ribbon spring. Special precautions during the design phase of the electronic control unit and power switching supply allow for reduced energy consumption when night mode is activated. The particular shape of the side caps allows the positioning of the connection cover between the two operators without any additional accessories in the double wing. Thanks to its can be used in any type of entrance, even in the most demanding architectural solutions. The multiple possibilities of use provided by the microprocessor make this operator an small size and straight and essential line **smartPRO**

essential accessory for the motorization of most swing application and as an upgrade of existing manual doors.

- Possibility to use different types of electric locks with different power values
- High resistance harmonic steel spring with life more than one million complete opening / closing cycles
- Set-up and commissioning directly on the control board or with the external selector/ programmer
- Operation logics with different types of function selectors and in WiFi with Sesamo app
- Transmission system with self-lubricated and sealed maintenance free chain
- PUSH & GO and Interlock functions
- Ready for sensor in CAN-BUS
- ON/OFF switch and standard 3 mode switch on the

side cap

INSTALLATION WITH PULL OR PUSH ARM

PULL ARM

PUSH ARM

OPTIONS

SMARTPRO M - Opening and closing by motor.
Suitable for many type of entrances, versatile and powerful.

SMARTPRO S – Opening by motor and closing by spring. Suitable for many types of use, in case of power supply failure, the operator becomes a mechanical door closer.

PROSWING

Proswing, the ideal operator for use in all conditions, great strength combined with a compact dimensional appearance. Suitable for large and heavy doors, easy to install and commissioning. It is equipped with a mechanical device that manages the spring closing force by increasing the thrust when the door is almost closed to ensure complete closure with any type of mechanical lock. The design solutions adopted in **Proswing** are designed to ensure it works correctly even in extreme conditions such as in the presence of wind, very heavy wings or high pressure gradients without requiring the addition of other additional costs. The control board provides the installer with a wide choice of parameters and operating modes through quick and intuitive programming. The use of surface hardened gears, an elastic coupling for shock absorption, a very high quality gearmotor, a controlled yielding spring with 3 million life cycles and an electronic control board that undergoes three testing cycles guarantee a **Proswing** a long life and reduced maintenance costs.

electronic control boards for upgrades

- Possibility of operation in "low energy" mode: reduced speeds and accelerations optimized for use by people with mobility difficulties, in accordance with current regulations
- PUSH & GO and interlock functions
- ON / OFF switch and standard 3-mode switch on the side cap
- Set up and commissioning directly on the control board
- High torque value
- Management of different types of electric locks / electromagnets
- Force recovery and adjustment cam device in the final closing phase to allow correct coupling with different types of locks
- Adjustments of the force values in opening and closing that allow use in various environmental conditions, in the presence of wind or in pressurized rooms
- Possibility of configuring 2 input signals and 2 auxiliary outputs on board

INSTALLATION WITH PULL OR PUSH ARM

PULL ARM

PUSH ARM

OPTIONS

PROSWING M - Opening and closing by motor.

Suitable for any type of entrances, versatile, strong and powerful.

PROSWING S - Opening by motor and closing by spring.

Suitable for any types of use, in case of power supply failure, the operator becomes a mechanical door closer.

PROSWING F – Automatism with integrated system that closes in case of fire/smoke alarm.

Anywhere an automatic barrier for fire and smoke is required, approvals for country specific directives and regulations must be followed. Operator tested according EN1634-1.

PROSWING R - Opening by spring, closing by motor. Operator designed to open the door by spring for smoke extraction, in the event of fire, emergency when power failure.
